

Glastonbury Animal Hospital strives to offer the best possible standard of care for our patients which is why we recommend preventative diagnostic testing as a part of your pet's annual visit today. Our doctors recommend that patients of ALL ages have an internal organ evaluation every year. Diseases of the liver, kidneys, diabetes, anemia, inflammation, infection, and other life threatening conditions can be missed without preventative testing.

### **Benefits of Preventative Diagnostics**

#### **GET A COMPLETE PICTURE OF YOUR PET'S HEALTH**

We want to make sure your pet's internal organs are functioning as they should be, as well as confirm the health of their overall cells.

#### **CUSTOMIZE BASELINE VALUES FOR YOUR PET**

Establishing a customized baseline for your pet allows your vet to monitor even subtle changes as your pet ages to better detect and treat illnesses early on before your pet displays symptoms.

#### **EARLY DETECTION OF DISEASE**

Detecting disease before physical symptoms are present often leads to better treatment success, as well as much less expensive treatment options for your pet.

### **Complete the Picture of Your Pet's Health with an Internal Exam!**
